CAREER GOALS

With a solid foundation in programming and software development skills, I aspire to become a professional software engineer at a leading technology company. My goal is to apply and enhance my programming skills to create efficient and innovative software solutions. I hope to participate in large projects, learn from experienced colleagues, and gradually advance to a project leadership or technical management position. I am always eager to continuously improve my knowledge of new technologies to contribute more to the development of the company and the tech community.

TECHNICAL SKILLS

FRONT END	BACK END
React	NodeJS - NestJS, Express
VueJs	PHP - Laravel
NextJs	

FAMILIAR

Jira	Docker
Github | GitLab	Linux

CAPABILITIES / SKILL

Complex problem solver

Complex Problem-Solving Skills: I have repeatedly analyzed and debugged challenging issues in projects, identifying root causes and finding effective solutions. I am not afraid to tackle

SUMMARY

Throughout my web development journey, I have encountered numerous challenges and gained valuable insights at every stage of application development. With proficiency in Node.js and PHP, I have successfully built a variety of flexible web applications. I am also eager to learn new languages as needed. Project management is an integral part of my process, and I take pride in the strong foundation I have established in this field. My experience as a team leader has been invaluable, guiding my team through various projects. Programming is more than just a job for me, it is my passion. I am constantly seeking opportunities to learn, adapt to new technologies, and stay updated in the ever-evolving IT industry.

EXPERIENCE

Now

LAIDON VIETNAM
Full Stack Developer

SimpleMDG provides a comprehensive governance process, including a request management solution and a standardized approach to validate Maintenance Request at the process, control, and attribute level ot prevent incompliance data from becoming operational and transactional.

- Architecture: Microservice, Event driven architecture, Restful API.
