

LUU HOANG NHAN

SOFTWARE ENGINEER

luuhoangnhan1080@gmail.com • 0343 979 214 • linkedin.com/in/nhan-luu-hoang

SUMMARY

With a strong foundation in programming and software development, I aim to become a professional software engineer at a leading technology company. I have 6 years of experience in server-side programming, specializing in building cutting-edge Golang and Node.js microservices. I excel in designing scalable, domain-oriented, and event-driven architectures for large-scale systems, particularly in Real Estate, E-commerce, and ERP domains. I strongly embrace a DevOps culture, taking full ownership of the design, build, and operation of my services to improve availability, scalability, latency, and efficiency. Passionate about engineering excellence, I continuously explore cloud-native technologies, full end-to-end observability, and data-driven product development. In the long term, I strive to grow into a Technical Architect role — mentoring teams, setting engineering standards, and building meaningful products that impact millions of users.

EXPERIENCE

LAIDON Vietnam Software Engineer	Ho Chi Minh City, Vietnam June 2022 – Present
SimpleMDG provides a comprehensive governance process, including a request management solution and a standardized approach to validate Maintenance Requests at the process, control, and attribute levels to prevent non-compliant data from becoming operational and transactional.	
• Architecture & Design: Designed and built scalable, cost-optimized backend services to improve the availability, scalability, latency, and efficiency of the system. • Event-Driven Systems: Handled message queues and asynchronous processing using Event Mesh to optimize data retrieval efficiency, ensuring high performance and resiliency after failures. • Observability & Operations: Embraced a DevOps culture by designing audit logging mechanisms for all services. Monitored and debugged complex production software to ensure full end-to-end observability and system stability. • Product Development: Worked closely with product managers to implement features and data pipelines, exploring a data-driven approach to evaluate impact. • Database & Performance: Redesigned database structures to reduce redundancy. Handled bulk data processing, resolving long-standing performance bottlenecks. • CI/CD & DevOps: Managed deployment pipelines, taking full responsibility for operating the services and ensuring smooth continuous delivery. • Mentorship & Standards: Mentored junior developers, improved overall engineering standards, and drove code quality with 70% test coverage. • Planning: Planned and broke down tasks into milestones, performed time estimation, and self-managed workload. • Collaboration: Discussed with developers to break down tasks and define the technical solutions to implement features. • Documentation: Wrote detailed design documentation for both new and existing features. • Feature Development: Data pipeline. Implemented graph data structures and applied the Breadth-First Search (BFS) algorithm for graph traversal and shortest-path discovery. • Utilized: Node.js, Microservices, SAP HANA, SAP Cloud, Message Queue (Team size: 20+).	

LIFULL Tech Vietnam Software Engineer	Ho Chi Minh City, Vietnam June 2022
A real estate and housing information aggregation web service that is Japan's top provider in terms of the number of available properties. Worked as a Software Engineer to develop and deploy both frontend and backend APIs.	
• Explored and created new architectural designs geared towards scale and high performance. • Integrated with AWS cloud services and third-party platforms to extend system capabilities. • Implemented caching strategies and redesigned database structures to handle large-scale traffic. • Developed server-side UI, CMS APIs for custom templates, and core RESTful APIs. • Performed code reviews, improved unit test coverage to 60%, and assisted in business requirement analysis and UML design. • Contributed to project scoping, work breakdowns, and effort estimation within an Agile framework. • Utilized: PHP, Ruby on Rails, JS, AWS (EC2, RDS, SES, S3) (Team size: 15+).	

gumi Viet Nam Full Stack Developer	Ho Chi Minh City, Vietnam January 2019 – June 2022
Contributed to and led diverse software products, designing features from administrative panels to core asynchronous pipelines.	

E-Commerce System (Project Leader & Full Stack Developer) • Led a team of 10 developers; interfaced directly with the client to discuss and translate business requirements. • Built a robust orders management hierarchy (administrators, agents, and users) with comprehensive permission structures. • Integrated VNPAY online payment gateway and set up real-time notification delivery via FCM. • Developed administrative dashboards using Angular and RESTful API endpoints with Node.js. • Configured Docker-based development environments, managed CI/CD pipelines, and registered applications on Google Play Store and Apple App Store. • Utilized: Node.js, PostgreSQL, Angular, NativeScript, Firebase.
Point & Gift Reward System (Full Stack Developer) • Built RESTful APIs with Node.js and point management panels with Vue.js. • Configured FCM notifications and deployed services using AWS cloud structures. • Utilized: PHP, Node.js, MySQL, Vue.js, AWS (EC2, RDS, S3, SNS) (Team size: 10+).
Intern Recruiting & Event Management System (Full Stack Developer) • Developed administrative portals in Vue.js and backend RESTful APIs with Node.js. • Engineered mass mailing templates and schedulers to coordinate event registration actions across multiple Japanese cities. • Utilized: PHP, Node.js, MySQL, Vue.js, AWS (EC2, RDS, S3, SNS) (Team size: 10+).
In-house Corporate Resources Management System (Back End Developer) • Developed company-wide booking and office resource management APIs and SSR frontends using Laravel/PHP. • Led database migration tasks, transferring and sanitizing historical company data onto new schemas. • Utilized: PHP, MySQL, HTML, CSS, JavaScript, AWS (EC2, RDS, SES, S3) (Team size: 10+).

TECHNICAL SKILLS

Frontend Technologies: React, Vue.js, Angular, Next.js, HTML5, CSS3, JavaScript (ES6+), TypeScript

Backend Languages & Frameworks: Node.js (NestJS, Express), Go/Golang (Gin), PHP (Laravel)

Databases & Storage: MySQL, PostgreSQL, SAP HANA, SAP Cloud, Redis, Firebase

DevOps, Cloud & Tools: Docker, Linux, Git, Jira, AWS (EC2, RDS, SES, S3, SNS, etc.), GCP, Message Queue (SAP, Kafka), CI/CD pipelines

CAPABILITIES & COMPETENCIES

Complex Problem Solver: Proven ability to analyze and resolve complex technical issues by identifying root causes, implementing robust solutions, and optimizing system performance.	Leadership & Management: Experienced in leading dev teams, organizing sprints, planning timelines, and delivering high-quality products under tight milestones.
Team Collaboration: Solid experience in multi-disciplinary Agile teams (10-20+ members) ensuring clear developer communications and technical synergy.	Research & Innovation: Constantly exploring and integrating state-of-the-art tools, database systems, and architectural patterns to address requirements.
Remote-First Operations: High self-motivation and discipline, maintaining transparency, accountability, and strong performance in remote environments.	Technical Mentoring: Dedicated to coaching junior engineers, establishing guidelines, conducting thorough code reviews, and raising test coverage.
